Maden Technologies Continues Support to JTF-GNO

Maden Technologies is pleased to announce that on July 1, 2006, the Joint Task Force—Global Network Operations (JTF-GNO) selected us as their solution provider for Sensitive Compartmented Information Facility (SCIF) operation and maintenance support. Awarded as a sole source contract under DITCO, our 26-person team will continue to support JTF-GNO for a 12-month base contract period and four one-year option periods. The Maden Technologies team delivers combined security, infrastructure, and secure network environments along with enabling security services.

The JTF-GNO Applied Technologies Unit (ATU) was formed at Maden Technologies' Technology Integration Center in 2002. Since that time, we have created and enabled the secure working environment to assist the ATU in defending the Global Information Grid (GIG). The GIG is the globally interconnected, end-to-end set of information capabilities, associated processes, and personnel for collecting, processing, storing, disseminating, and managing information on demand to warfighters, policymakers, and support personnel. We understand how important this work is to the defense of the nation and are delighted to continue supporting this mission.

Maden Technologies looks forward to a continued trusted advisor relationship with the JTF-GNO ATU.
